The original idea

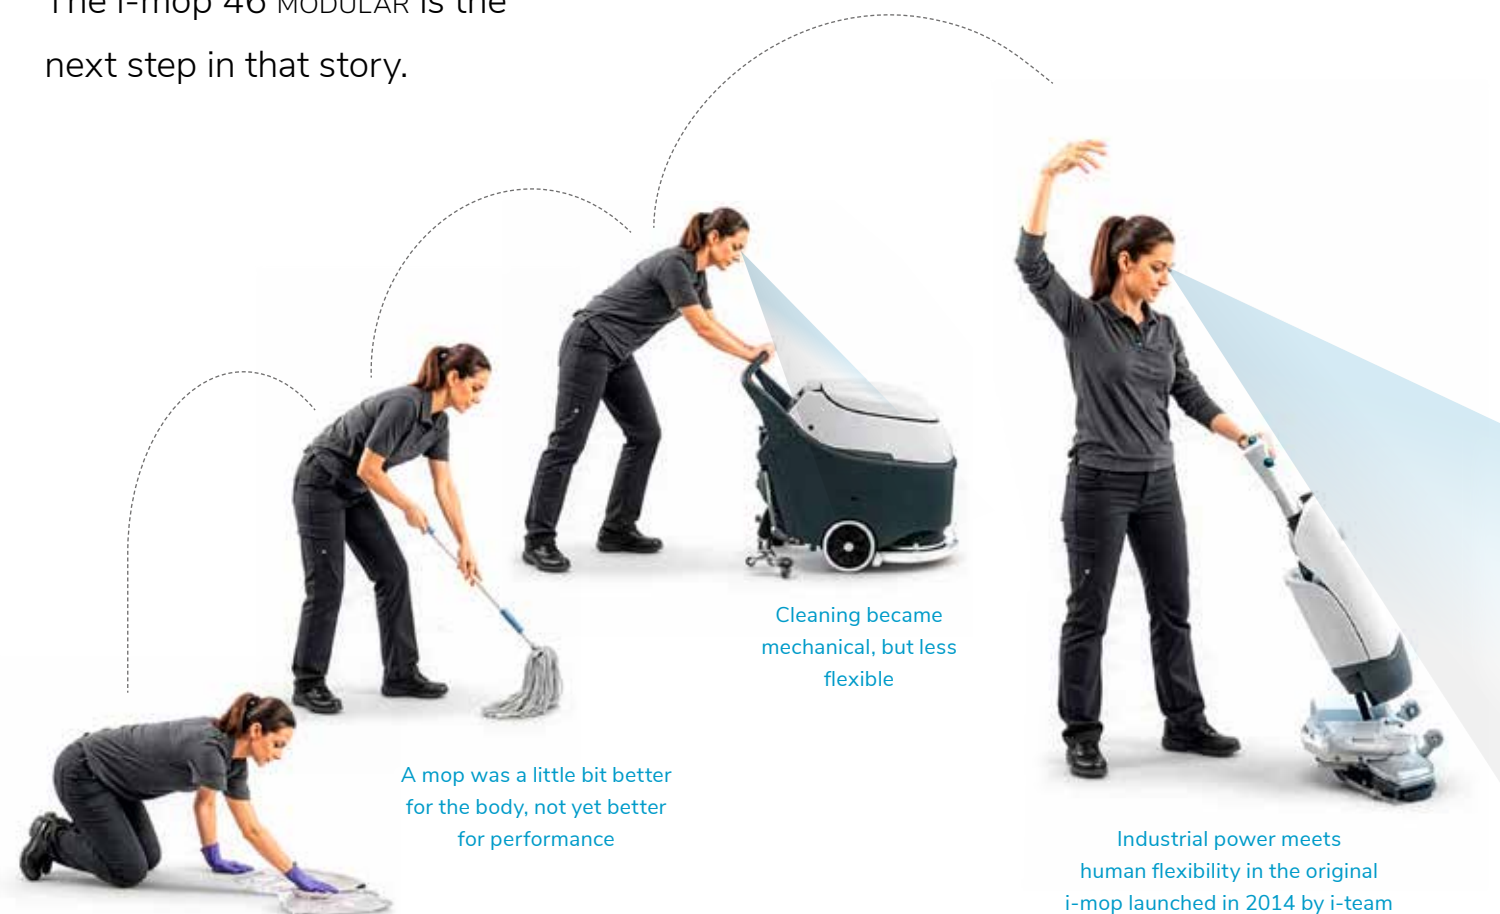

The i-mop changed cleaning in 2014

In 2014, the original i-mop changed the way professionals clean floors. It brought together two worlds that used to be separate: the power of a scrubber dryer and the freedom of a mop.

That idea changed more than the machine. It changed the movement of cleaning. And it has never stopped evolving.

The i-mop 46 MODULAR is the next step in that story.

- original i-mop innovation since 2014
- built on continuous development
- designed around the cleaner
- part of the i-team ecosystem
- protected by 50+ patents

Cleaning was survival work

Designed for effortless handling and maximum comfort for the operator

Cleaners could work upright. Move freely. Clean faster. Use less water. And remove dirt instead of spreading it around. That was the shift from mopping to i-mopping.

i-mop 46 MODULAR

More capacity. Smarter by modular design.

The i-mop 46 MODULAR carries forward trusted i-mop XL performance in a smarter, more efficient platform. With more water capacity, fewer refill stops, a U-shaped battery setup and a modular build, it is designed to reduce interruptions and make service easier.

4.6 L water capacity

More water on board for longer cleaning runs.

20% more working capacity

Reduce your water refill pit stops.

Clean 600 m² in standard mode or 960 m² in eco mode*

Keep cleaning longer before the next refill.

U-shaped battery setup

Trusted i-mop performance with a more accessible investment. One i-power 14 battery gives you up to 80 minutes of runtime, depending on the floor type.

Modular platform

Designed for easier maintenance and smarter service.

6.5 L recovery tank

More room for recovered dirty water.
Fewer interruptions.

Drive support

Like cruise control for cleaning, drive support helps cleaners keep a smooth, steady pace.

*Theoretical performance

i-mop 46 MODULAR

Designed for easier
maintenance, smarter
service and longer
product life.

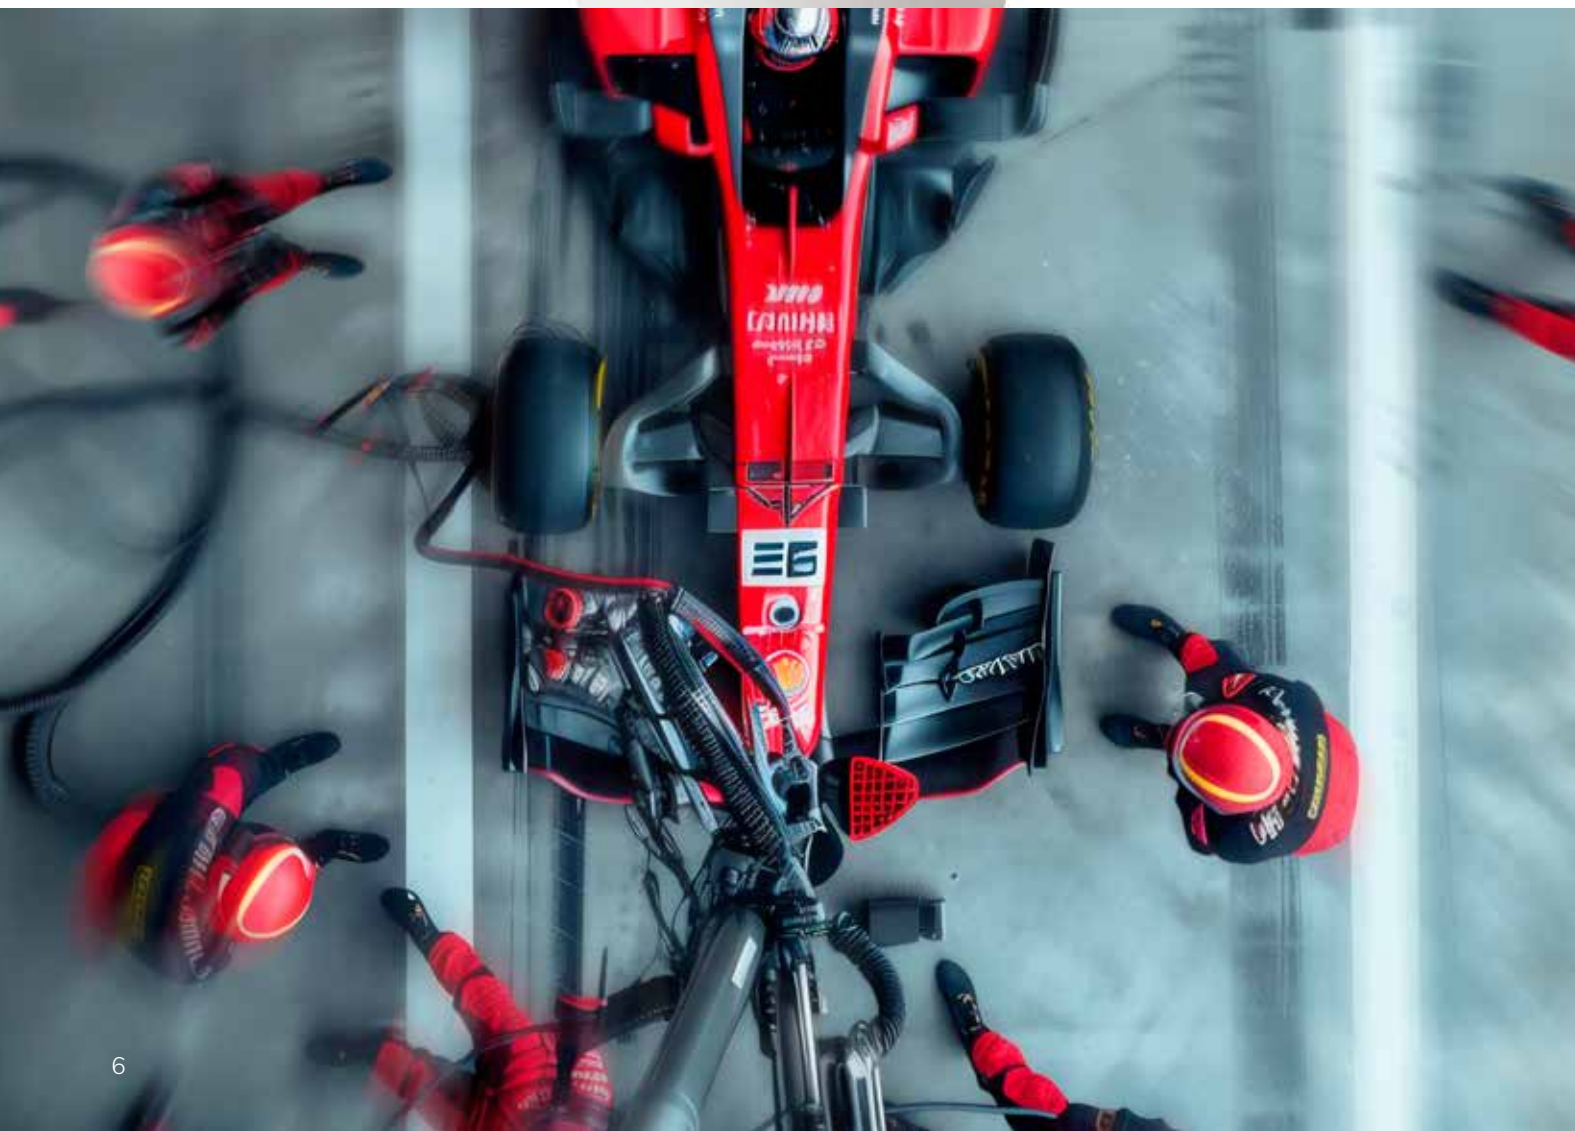

PROTECTED
BY 50+
PATENTS

Fewer pit stops. More i-mopping.

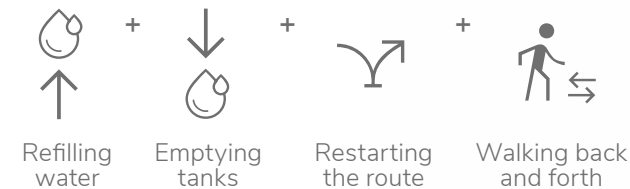

4.6 L water capacity

Keep moving longer before the next refill.

More water on board. Fewer refill moments. More time on the floor.

A refill stop is never just a refill stop. It interrupts the route. It breaks the flow. It takes the cleaner away from the floor. In daily cleaning, those moments add up: walking back to the water point, refilling, emptying, restarting and getting back into rhythm.

The i-mop 46 MODULAR is designed to reduce those interruptions. Compared to the i-mop XL, it carries more clean water and has more room for recovered dirty water. That means fewer refill moments, fewer interruptions and more time on the floor.

One tank. More floor.

600 m² in standard mode,
960 m² in eco mode
before the next refill

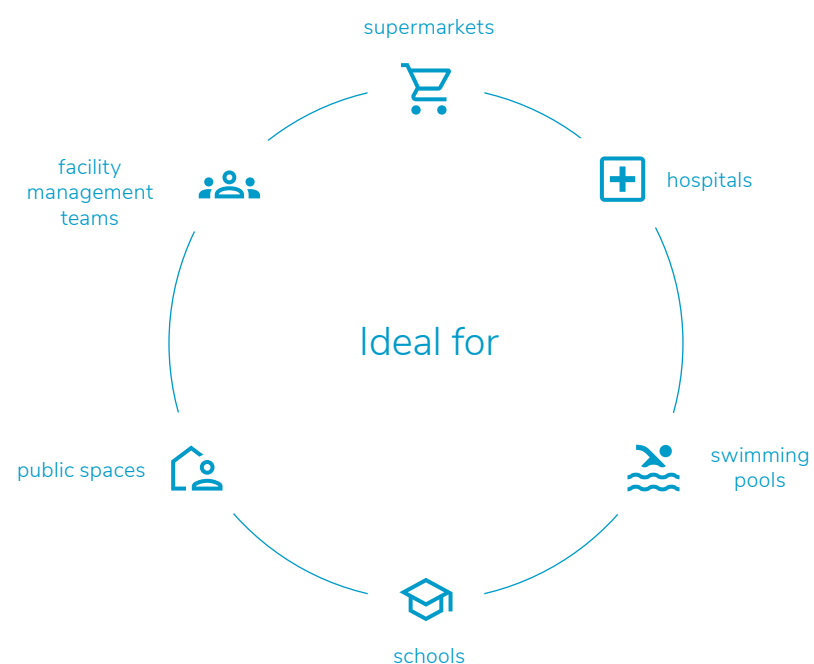

Large enough to
cover ground
**Agile enough for
real spaces**

The i-mop 46 MODULAR is made for large environments where cleaning teams need both capacity and agility. Think aisles, corridors, entrances, public areas, and spaces where people, furniture, and obstacles are part of the job.

With the ability to cover 100 m² in just 3.5 minutes; it helps teams move efficiently through the route without losing momentum.

The i-mop 46 MODULAR gives cleaners the working width to move efficiently without losing the flexibility that makes the i-mop different.

Take me for a dance
around the floor
— i-mop 46 MODULAR

Smarter service starts with a modular machine

Cleaning teams need machines they can rely on. But service is becoming more complex. Technical people are harder to find, downtime is expensive, and unnecessary service visits take time, transport, and resources.

The i-mop 46 MODULAR is designed differently. Its modular platform makes components easier to diagnose, swap, and service. Indication lights help tell the story of what needs attention, while swappable parts make it easier to get the machine back to work.

It also opens the door to new ways of working. Less reliance on service vans. More use of shared transport. Fewer unnecessary movements. Less waste. Longer product value.

- modular build
- service diagnostics
- swappable components
- clearer indication lights
- easier maintenance
- less downtime

Smart indicator lights show what needs attention, so service can start faster.

green meets blue

The i-mop 46 MODULAR is built with a modular, serviceable design, so individual parts can be replaced instead of taking the whole machine out of use.

That keeps service simple, extends the life of each unit and helps reduce unnecessary waste.

Built to swap. Made to last.

- ✓ Replace parts individually
- ✓ Extend product lifetime
- ✓ Reduce unnecessary waste
- ✓ Support smarter service
- ✓ Keep machines working longer

Designed to last. Backed for longer.

The i-mop 46 MODULAR is built with a modular, serviceable design that helps extend product lifetime and reduce unnecessary waste. That is why the machine comes with a 3-year warranty. Excluding batteries.

When a mop & bucket is too slow and a walk-behind too bulky

The i-mop 46 MODULAR is built for the space between traditional methods.

A mop is flexible but slow and physically demanding. A horizontal scrubber dryer is powerful but not always easy to move, refill, service, or use in more complex spaces.

The i-mop 46 MODULAR brings these worlds together. It delivers professional scrubbing power in a vertical system that is agile, easy to maneuver, and simple to use in daily cleaning.

Full size scrubber dryer with the flexibility of a flat mop

faster

Gain time

Cleaning time matters. Not because cleaners should do more in less time, but because repetitive floor cleaning should not take more time than needed.

The i-mop helps teams clean more floor area faster, without asking cleaners to work harder.

safer

Dry faster

Wet floors slow everything down. They interrupt movement, create slip risks and often require wet floor signs long after the cleaning is done. The i-mop changes that. It scrubs the floor and recovers the dirty solution immediately, leaving floors dry in seconds and ready to use again.

greener

Use less water

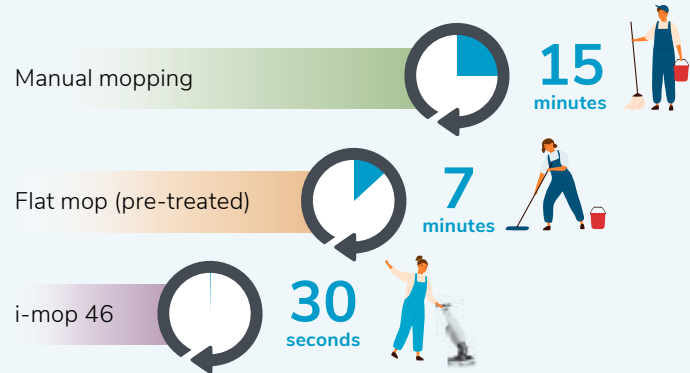

Traditional mopping uses and leaves behind more water than needed. The i-mop applies, scrubs and recovers water more efficiently, so every liter contributes to a better cleaning result.

Time* needed to clean 100 m²

*Theoretical performance

Required time for the floor to dry

The difference is easy to see

ATP* test results

safer

cleaner

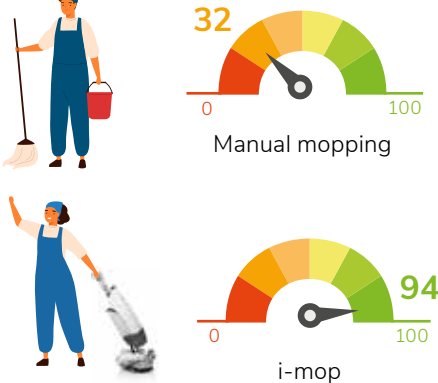

*ATP is an indicator of biological contamination that cannot be seen by the naked eye. The result is shown in RLU: the lower the number, the cleaner the surface.

Ergonomic score

better

Smart support in every move

The i-mop 46 MODULAR is designed to make daily cleaning feel smoother, smarter, and easier to control.

From movement and parking to dosing and deep scrubbing, every feature supports the cleaner in doing the job with less effort, fewer interruptions, and more confidence.

Like cruise control for cleaning

Drive & Park support helps cleaners move the i-mop 46 MODULAR with less effort and more control. It supports a smooth, steady pace while cleaning, so the machine feels lighter to guide through the route.

With a simple foot action, the support system can also help park the i-mop in the right position without lifting the deck. That makes it easier to pause, switch tasks, or leave the machine safely parked between cleaning moments.

Ergonomic support that moves with the cleaner

The patented i-balance spring system helps reduce physical strain during daily cleaning. It lowers the weight in the hands from 3 kg to just 0.7 kg, making the i-mop 46 MODULAR feel lighter, easier to guide, and more comfortable to use.

The height-adjustable handle and reinforced grip support better handling and control, while the integrated work light on the deck improves visibility in low-light areas.

Fewer movements. Less strain. Manual mopping takes around 400 movements per 100 m². With the i-mop, this drops to around 19 movements per 100 m². That means fewer repetitive movements, less physical strain, and a smoother way to clean.

Give liquids the time to work

Easy lift kit
Sometimes detergents or disinfectants need dwell time to do their job properly.

With the easy lift kit, the squeegee can be lifted from the floor with a simple switch. This makes it easier to deep scrub, apply solution and give cleaning agents the time they need before recovery.

Ready to walk with i-walk

For teams that want to take productivity even further, the i-mop 46 MODULAR can also be used with i-walk. This opens the door to a smarter, more automated way of cleaning larger routes while keeping the flexibility of the i-mop system.

No edge left behind

The i-mop 46 MODULAR moves easily along walls, furniture, and fixtures, so cleaners can get closer to the places where dirt likes to hide. With only 4 simple buttons, operation stays easy too.

The right dose, every time

Getting detergent dosage right is not always easy. Too much product means unnecessary cost, waste, and environmental impact.

With **i-dose**, cleaners use pre-measured cleaning pods that release the right amount of concentrate into the water. No guessing. No spilling. No overdosing.

The result is a simpler, cleaner and more responsible way to dose.

What is i-link?
With i-link, you can gather data and insights about when, where and how your i-mop is being used. Scan the QR code to discover how smart connectivity helps you understand your fleet better.

Choose your i-mop 46 MODULAR: Plus or Pro

The i-mop 46 MODULAR is available in two versions: Plus and Pro. Both are built on the same modular platform, with the same focus on more capacity, easier service and more time to clean.

The difference? The Pro version adds smart connectivity and i-dose support for teams that want more control over data, dosing and daily operations.

Feature	i-mop 46 MODULAR PLUS	i-mop 46 MODULAR PRO
i-link connectivity	X	✓
i-dose tank	X	✓

The i-mop 46
is part of a
bigger vision

Moving cleaning forward, responsibly.

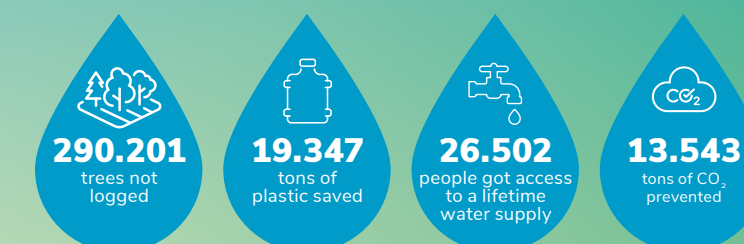

At i-team, innovation is not only about building better machines. It is about creating better ways to clean: with less waste, smarter use of resources and more care for the people, and communities connected to cleaning.

That is why the story of the i-mop also connects to **Made Blue** and **B Corp**.

MADE BLUE EVERY LITRE MATTERS

The i-mop is designed to use water more efficiently in daily cleaning. Through i-team's partnership with Made Blue, water also becomes part of a bigger impact story. For every litre used by active i-mops, i-team supports access to clean drinking water for communities in need.

SINCE 2015, I-TEAM HAS DONATED OVER 2 BILLION LITRES OF CLEAN DRINKING WATER IN DEVELOPING COUNTRIES. THIS EQUALS:

BETTER BUSINESS.
BETTER CLEANING.

B Corp reflects the belief that business should create value for more than shareholders alone. It looks at how a company performs for people, communities, customers, suppliers, and the environment.

For i-team, that fits the way we think about cleaning: better machines are only part of the story. Better work, better choices, and better impact matter too.

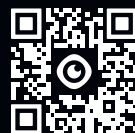

We won't keep you in the dark.

The lights are on. The specs are ready.
The i-mop 46 MODULAR is waiting.
